## **SABO Unveils Innovations for Professional and Municipal Applications**

SABO-Maschinenfabrik GmbH is expanding its range of machinery for professional use in municipal services, landscaping, and the maintenance of large green areas. With new equipment and a reinforced service commitment, the company is specifically targeting users with high demands in green space maintenance.

### **Focus on Municipal Equipment**

With the THUNDER 100 C and THUNDER 100 F FLEX models, SABO is introducing remote-controlled crawler mowers that stand out for their off-road capability and flexibility. While the 100 C features a rotary mower deck, the F FLEX version combines a flail mower with an adjustable track width.

For large-area maintenance, SABO is presenting battery-powered wide-area mowers for the first time with the MOWIT PRO series. The three models can be equipped with either a 132 cm mulching deck or a 120 cm rear-discharge mower deck. Depending on the configuration, they can operate via remote control, semi-autonomously or fully autonomously with RTK support. A GPS-assisted navigation system enhances guidance, and the vertically tiltable mower deck design allows for easy maintenance and blade access. With a total height of only 48 cm, these mowers are ideal for use in solar parks, public green spaces, and hard-to-reach areas.

### **New Products for the Professional Sector**

SABO is introducing powerful professional brushcutters equipped with STRATO CHARGED technology, which reduces unburned emissions by up to 80%. Three models will be available from the third quarter and are compatible with both nylon heads and metal blades.

The 54-R VARIO B (SABO PRO petrol engine) and the battery-powered 54-E R VARIO expand SABO's portfolio of roller mowers. An optional universal lawn brush is available to remove thatch and organic debris – especially beneficial for hybrid grass surfaces such as sports fields.

### **A Reliable Partner in the Field**

SABO remains a dependable partner for professional users: a nationwide network of specialist dealers ensures rapid support with maintenance and long-term spare parts supply. Product demonstrators travel across Germany to showcase equipment in real-life conditions and provide on-site consultations.

### **Experience SABO Live at demopark**

SABO-Maschinenfabrik will present its expanded product range for professional and municipal users at demopark in Eisenach (22–24 June 2025, Stand G-732). Visitors can see the new products in action and engage directly with SABO experts on-site.
