Successful demopark 2025: SABO impresses with innovations and expanded product portfolio

SABO-Maschinenfabrik GmbH has drawn a thoroughly positive conclusion to this year's demopark. Despite the summer heat at the start of the event and the weather-related evacuation on the second day, the company considers its trade fair appearance a complete success. Numerous trade visitors from commerce, industry, gardening and landscaping, local authorities and the private sector enlivened the SABO stand with technical discussions and valuable exchanges.

MOWIT PRO: Forward-looking technology for demanding ground care

SABO gave a highly acclaimed preview of the upcoming MOWIT PRO series of remote-controlled and autonomous large-area mowers. The MOWIT PRO series will be available in three individually configurable versions:

- MOWIT PRO RC with radio remote control and a range of up to 250 m
- MOWIT PRO GPS with GPS-assisted navigation and electronically controlled compass servo drive
- MOWIT PRO RTK with RTK navigation, autonomous driving mode, radar, receiver mast and AI-assisted obstacle detection

The MOWIT PRO models are ideal for maintaining golf courses and, thanks to their low height, are also suitable for solar parks.

Return of the SABO rear roller mowers

With the reintroduction of two rear roller mowers to its current product portfolio, SABO once again offers models for particularly precise lawn care. Both models feature a robust aluminium housing and a two-part metal cylinder with a width of 500 mm, which enables increased manoeuvrability.

The rear roller mowers are available with either the new, powerful SABO PRO petrol engine or the emission-free EGO powerhead and deliver a particularly even cut with the characteristic striped pattern.

Significant enhancements to the existing range

The proven portfolio has also been expanded in a meaningful way:

- In the HOME segment, the 47-DRIVE models with selectable wheel drive and the 54-VARIO B with a new SABO engine and blade brake expand the portfolio
- In the PRO segment, the new 53-PRO M VARIO PLUS impresses with a large 6-litre tank and the new, powerful SABO PRO engine

- In the municipal segment, the remote-controlled THUNDER 100 C mowing crawlers with sickle mower and THUNDER 100 F FLEX with flail mower and adjustable track width, as well as the GLADIATOR 95 F 2WD & GLADIATOR 110 F AWD ride-on flail mowers, complement the portfolio.

All professional petrol mowers will gradually be equipped with the new SABO PRO engine and electrical insulation. The latter electrically isolates the upper frame from the rest of the machine: a safety feature that SABO consistently implements, although it is currently only required by law for battery-powered devices.

Product innovations and premiere of new categories

SABO also presented three new professional petrol brushcutters with STRATO CHARGED TECHNOLOGY. These use a two-stage channel system to reduce unburned hydrocarbons and offer higher combustion efficiency and reduced fuel consumption.

Another highlight was the premiere of the new sweepers for year-round use: They mark SABO's entry into a new product category and expand the portfolio with multifunctional machines for demanding users.

Innovation as a driving force

With the positive momentum from demopark, SABO is starting the second half of the year with a bang. As a German premium manufacturer, the company is once again underlining its claim to set standards in the areas of private, professional and municipal applications.

We would like to thank all visitors and look forward to seeing you again at demopark 2027.
