

Press Release

Product Offensive for the 2026 Season: SABO Unveils New Generation of Lawn Tractors

SABO is expanding its portfolio in spring 2026 with five new models: ranging from an agile ride-on mower to a powerful 102 cm twin-cylinder tractor. The new series focuses on comfort and cutting quality. Equipped with engines delivering up to 16 kW and an asynchronous mowing deck, they offer high torque and a clean cut.

High-end features set the standard: a digital display, high-intensity LED headlights with automatic light control and an ergonomic premium seat ensure fatigue-free operation. In addition, all five new models are equipped with a trailer hitch and front bumper as standard.

Overview of the new models

The three new rear discharge models (84-H, 92-H, 102-H) feature a generous 280-litre collector box, an acoustic and visual signal in the display informs the operator of the fill level. The retractable telescopic lever is ergonomically curved towards the driver's seat, allowing for convenient operation from the seat.

- SABO 84-H: The entry-level model with a solid 8.8 kW single-cylinder engine.
- SABO 92-H: The powerful all-rounder with a 13.5 kW twin-cylinder engine.
- SABO 102-H: The flagship model for maximum area coverage, featuring a 102 cm cutting width and a 16 kW twin-cylinder engine.

SABO 98-S Side Discharge: The new side-discharge model is designed for maximum area performance without interruption. Powered by a 13.5 kW twin-cylinder engine, the 98-S offers the full premium specification of the new generation, including electric blade engagement, an LED lighting package, and a digital display.

SABO 66-H Ride-On Mower: A compact ride-on mower for small and complex gardens. The 66-H impresses with its flexible "3-in-1" concept: It can be used as a side-discharge mower, mulcher or classic rear-collector with a 150-litre grass box. Featuring an efficient 4.5 kW engine, mechanical cutting deck engagement and a single-blade cutting deck, it delivers maximum agility in confined spaces.

The new generation of SABO lawn tractors will be available from specialist dealers starting in spring 2026.
